Name			
Address			
City	State	Zip	
Phone			
Email			

Mail to: NAMA Memberships
c/o Ann Bornstein
61 Devon Court,
Watsonville, CA, 95076-1160

Annual membership dues outside the US are \$40.

The North American Mycological Association (NAMA) is an organization serving amateur Mycologists for over 50 years. Evolving from Eisenhower's People-to-People Committee on Fungi in November 1959, NAMA was founded by Harry S. Knighton (1915-1999) of Portsmouth, Ohio, our first chairman.

NAMA focuses on serving individuals as well as Mycological Societies and Mushroom clubs.

NAMA provides many educational opportunities for members and affiliated clubs. NAMA's Speakers Bureau has a pool of over 50 professional and amateur mycologists who can provide excellent programs for club meetings and forays.

NAMA has an extensive inventory of programs for loan in a variety of media (CD, DVD, slides and VHS) for use by individuals and in club meetings. The newest programs are in PowerPoint format with sound, created by Dr. Michael Beug, and can be customized for your presentation.

NAMA is a national resource for mushroom poisoning and toxicology information. We host a mushroom poisoning case registry. A large group of volunteer mushroom identifiers respond to mushroom poisoning incidents from Poison Control and hospital emergency rooms all over North America.

The *Mycophile*, NAMA's newsletter, is a great source of club information, news, events, book reviews, articles, photography contest results, and the mushroom of the month.

The journal *Mcllvainea* is an online, peer-reviewed journal, with scientific papers, toxicology reports, and more. NAMA offers extensive information about mushroom cultivation on the NAMA website.

To join a mushroom club near you visit our web site to find an affiliated club.

Explore your creative side with Mushroom Photography. View award winning photos from the annual photo contest on our website.

NAMA and its affiliated clubs sponsor an annual foray, where a large cohort of professional mycologists and hundreds of participants explore the fungi of the local region. These events are a great place to meet new people, learn from fellow mycologists, and attend dozens of presentations and workshops.

In addition, NAMA sponsors regional forays, where attendance is limited to ensure an in-depth learning and convivial atmosphere.
